## PROFESSIONAL EXPERIENCE

---

- **Full Stack Developer at Safer(Jan 2018 – Present)**
  - ✓ The design of a mechanized software system for car technical inspection with automatic license plate recognition led to higher quality and 30% time savings.
  - ✓ Developed a trucking bill of lading registration system as a desktop application that helped transport companies lessen paper consumption by 80% and ease the registration time and truck driver scheduling process. Eliminating the cost of transportation companies by 10%.
  - ✓ Created an accounting system with the ability to connect to the cargo registration system, which led to a 20% time reduction.
  - ✓ Prepared a mobile application for drivers to access the system, which saved 50% for drivers.
  - ✓ Presented a mobile application for transport companies greatly facilitates their access to the system.
  - ✓ Provided a mobile application for goods owners to access the system through mobile phones.
  - ✓ Implemented the web-based system of the truck waybill registration system. There was a 5% cost savings for the transport companies.

- ✓ Integration of all transport companies into this web-based system, faced with a high-volume database and massive data. By optimization of SQL queries and tuning tables, system performance was improved and became 10 times faster.
- **Full Stack Developer at Phoenix(Sep 2014 – Dec 2017)**
  - ✓ Participated in creating a tender and auction system to control tenders and auction processes and eliminated 90% of paper correspondence.
  - ✓ Designed a web-based contractor management system. Provided communication between the employer and contractors. That caused a 70% reduction in paper consumption and a 10% reduction in companies' correspondence costs.
  - ✓ Led a team to complete a supplier management system that helped organizations to direct their supply chain effectively and decreased costs by 20%.
  - ✓ Refactored the source code of the old automation system with the new one.
- **Junior Full Stack Developer at Behsan(May 2012 – Aug 2014)**
  - ✓ Founded a very flexible call center and implemented that in over 50 Organizations. Automated the internal telephone systems.
  - ✓ Developed telephony applications for communication with various modems and phone-switching devices such as Panasonic PBX. Supported up to 64 external telephone lines.
  - ✓ Achieved a Web-based Application as a user panel of our telephony system. Cut down time costs by 10%.
  - ✓ Invented a flexible web-based shop with various products and executed for more than 20 companies.
  - ✓ Launched many websites for 100 companies.

## EDUCATION

---

- **Master's degree, Artificial Intelligence, Amirkabir University of Technology – Tehran, Iran**
- **Bachelor of Engineering, Computer Engineering, Yazd University – Yazd, Iran**

## LANGUAGES

---

- **Persian (Native)**
- **English (Conversational)**
